SUMMARY

Full-stack Java developer and Salesforce engineer with 4+ years of experience building high-performance web applications, cloud-native microservices, and real-time APIs. Currently architecting and building AI agents that span the entire healthcare journey — from intake assessment to discharge summary — on Salesforce at Peerstar. Proficient in React, Spring Boot, Hibernate, REST/GraphQL APIs, WebSockets, Redis, AWS, Docker, and CI/CD pipelines, driving improvements in scalability, security, and user experience. Skilled at streamlining workflows, enhancing accessibility, and mentoring teams to deliver robust features faster. Recognized for reducing system latency, optimizing release cycles, and elevating engagement across enterprise and consumer-focused platforms, ensuring seamless, data-driven digital solutions at scale.

SKILLS

Languages & Frameworks: Java (Core & Advanced), JavaScript (ES6+), TypeScript, Spring Boot, Spring MVC, Hibernate/JPA
Salesforce: User & Data Management, Security & Sharing, Change Sets, Salesforce Flows, Apex Programming, VF Pages, LWC, Data Loader, Workbench, CPQ, OmniStudio
Databases & Search: PostgreSQL, MySQL, MongoDB, SOQL, SOSL, Redis (caching)
Cloud & DevOps: AWS (EC2, Lambda, CloudWatch, S3), Docker, Jenkins, Bitbucket, Git, Jira, ALM
Security: OAuth2.0, JWT, RBAC, Cookie/Session Authentication
Testing & Tools: JUnit, Mockito, Postman, Jest, Cypress, Maven

EXPERIENCE

Lead Salesforce Developer
Jan 2026 – Present
Peerstar LLC — *Pennsylvania, PA*

- **Currently architecting and building Agentforce AI agents that span the full participant journey — from intake assessment and triage through referral routing and care-coordination follow-ups to automated discharge-summary generation** — with role-gated, HIPAA-controlled access to clinical and HR data, cutting manual handoffs across clinical and administrative teams.
- **Architected and delivered Peerstar's in-house EHR + integration platform — an estimated $0.9M–$2.2M in market build value** — replacing a failed third-party vendor and eliminating an estimated **$280K–$750K/year** in recurring licensing and managed-services costs.
- Shipped the referral & intake system a prior vendor **billed $300K+ for and failed to deliver** — now live in production.
- Kept **111,000+ visit records** in continuous two-way sync between Salesforce and the Credible EHR via the custom Apex data-sync engine.
- Recovered **17,689 billable visits** from a silent integration failure, purged **762K corrupt records**, and cut critical-alert noise from ~40,900 to ~720 — protecting data integrity across **2,180+ active participant charts**.
- Delivered leadership analytics providing first-time visibility into **$1.19M/month in collections** and surfacing **$11.5M in unused authorized service units** before expiry.
- Leading development of a peer addiction recovery application on Salesforce Health Cloud, leveraging standard objects, custom metadata, and scalable data architecture.
- Architected and shipped Peerstar's in-house Electronic Medical Record (EMR) as a React + TypeScript SPA delivered natively inside Salesforce via LWR Experience Cloud — 50+ components spanning intake wizards, referral workspaces, admissions queues, daily check-ins, and a 4-tab leadership analytics dashboard, wired to 6 custom Apex controllers.
- Designed a novel React-on-LWR delivery pipeline (Vite IIFE bundle → static resource → LWC shell mount) to bypass Salesforce LWS Locker constraints — solved blockers around ESM rejection, React Router lifecycle (createMemoryRouter), loadStyle/loadScript ordering, and static-resource cache invalidation, eliminating the need for a separate webapp + parallel auth/data-sync layer.
- Built a custom in-house design system (Button, Card, Drawer, Toast, Tabs, KpiCard, ChartCard, MultiSelectFilter) with light/dark themes and a 7-step intake wizard (demographics → consents → review), giving leadership real-time KPI dashboards and care-management teams a single workflow surface — replacing reliance on third-party EMR UIs for day-to-day clinical work.
- Designed end-to-end Referral & Intake Management using Opportunity lifecycle with 69+ clinical and demographic data points, multi-stage admission workflows, NPI tracking, and service preference modeling.
- Implemented Field Service Lightning (FSL) for specialist assignment, territory-based routing, availability matching, and regional director oversight.
- Built bidirectional Apex integration with Credible Behavioral Health EHR using Import/Export web services, automated CSV generation, retry mechanisms, and dynamic picklist-to-ID mapping via custom lookup object (Credible_Lookup__c).
- Configured Health Cloud clinical profiling (diagnosis, SDOH, substance history, recovery domains, care team involvement) to support IRP (Individualized Recovery Plan) development.
- Developed Experience Cloud portal with token-based authentication for remote intake, secure document uploads, and real-time onboarding support.
- Integrated Twilio SMS API for secure link distribution, intake communication, and digital consent collection.
- Managed full peer lifecycle from referral through admission/discharge tracking with no-admit analytics and reporting.

React Developer Intern
Jul 2025 – Dec 2025

Antra Inc *Sterling, VA*

- Developed full-stack web applications using React.js (frontend) and Spring Boot (backend), implementing RESTful APIs and JWT-based authentication.
- Designed reusable frontend components with optimized state management and asynchronous API handling.
- Built internal workflow and survey management systems with dynamic form rendering and validation logic.
- Deployed containerized applications to cloud environments, managing environment variables, build pipelines, and CI workflows.
- Improved frontend performance using code splitting, lazy loading, and render optimization techniques.
- Strengthened debugging, version control, and collaborative development practices in Agile teams.

Senior Software Engineer
Feb 2021 – Sept 2023

Accenture *Bengaluru, IN*

- Built scalable enterprise-grade web apps using React.js and Spring Boot microservices architecture, reducing load times by 25%.
- Designed and developed RESTful APIs supporting real-time dashboards and high-volume transactional systems; optimized backend services using caching strategies, query tuning, and batch-processing patterns handling 1M+ records.
- Refactored legacy monolithic modules into modular microservices, improving system maintainability and scalability.
- Developed Salesforce Apex (triggers, Batch Apex, and test classes with 90%+ coverage) and integrated CRM systems with custom React portals for unified enterprise data synchronization.
- Implemented CI/CD pipelines with Jenkins, Bitbucket & Docker, reducing deployment time by 30%; strengthened security using JWT authentication, RBAC, and secure API gateway configurations.
- Led code reviews and mentored developers on performance optimization, system design, and clean architecture principles.

PROJECT – Unilever VEEVA VAULT QMS & Unilever SONAR:

- Designed scalable backend workflows and campaign-management services deployed across 12+ European markets.
- Customized pricing and compliance modules aligning with regulatory requirements, improving operational efficiency by 15%.

Full Stack Software Developer
Jan 2020 – Jan 2021

Root Kings *Pune, IN*

- Developed full-stack applications using React.js and Spring Boot, delivering responsive dashboards and secure API-driven systems.
- Built Salesforce LWC components, Apex triggers, and Batch Apex jobs to support scalable CRM solutions.
- Designed REST APIs enabling structured data retrieval, filtering, and real-time updates; implemented JWT-based authentication and secure role-based UI rendering.
- Implemented Salesforce Shield encryption and field-level security for GDPR compliance; managed 50K+ record translations across 6 markets using Workbench.
- Optimized database interactions and backend processing to improve application throughput, collaborating in Agile teams to deliver end-to-end features.

PROJECTS

- **SkillBridge** Developed a full-stack job application portal using React.js, Spring Boot and MongoDB. (LIVE)
- **OrgForge** A full-stack Salesforce management platform that gives developers and admins deep visibility into their orgs — test execution, governor limits, health scores, deployments, flows, permissions, bulk data, and AI-powered SOQL — all in one place. (LIVE)
- **ApexPulse — Salesforce Apex Test Suite:** Built a full-stack application using React.js and Spring Boot integrating Salesforce OAuth 2.0 to discover and execute Apex tests with real-time tracking. Implemented async execution via Tooling API and WebSocket updates, designed a coverage analytics dashboard, and stored history in PostgreSQL. Secured tokens with AES-256-GCM, Dockerized, deployed on Render, boosting developer productivity beyond native capabilities. (LIVE) (Github)
- **YumRun** A full-stack food delivery platform with smart ordering using Spring Boot, MySQL (Amazon RDS). (LIVE)
- **NewsZap — Your-daily-dose-of-news** Designed a React-based news app delivering real-time headlines via NewsAPI. (LIVE)
- **DreamCRV** Developed a real-time car customization tool using Lightning Web Components OSS with form handling. (Github)
- **Gatherly** Invitation management app in Salesforce, streamlining event creation and RSVPs within the platform. (Github)

LICENSES & CERTIFICATIONS

Salesforce Certified Administrator ◇ Salesforce Advanced Administrator ◇ Salesforce Platform Developer I
Salesforce Platform Developer II ◇ Full Stack Automation Engineer ◇ Core Java Internship

EDUCATION

MS in Computer Science, Pace University GPA: 3.8/4 *Sept 2023 – May 2025*

Relevant Coursework: Data Structures & Algorithms, Distributed Systems, Cloud Computing, Web Technologies, Operating Systems, AI/ML, Android Development, DBMS, Design & Analysis of Algorithm, Software Testing.
