SUMMARY

Full-stack engineer and Salesforce lead with 5 years of experience building web apps, APIs and integrations in Java, React and Apex. Currently leading the build of Peerstar's in-house EHR on Salesforce, which replaced a failed vendor project. That work covers React apps that run inside Salesforce, Azure backends, a Chrome extension for reporting bugs, MCP tools and Agentforce agents, all connected to the Credible EHR and to outside systems such as Monday.com, Waystar and Twilio. Owns features end to end, from the design doc through production support.

SKILLS

Languages	Java, TypeScript, JavaScript (ES6+), Apex, SQL, SOQL/SOSL
Frameworks	Spring Boot, Spring MVC, Hibernate/JPA, React, Next.js, Node.js, Vite
Salesforce	Apex, LWC, Aura, Visualforce, Flows, Experience Cloud (LWR), Platform Events, Security & Sharing, Salesforce CLI, Data Loader, OmniStudio
Agents & APIs	Agentforce, MCP servers and tools, REST, GraphQL, WebSockets, Twilio, Microsoft Graph, Monday.com API
Cloud	AWS (EC2, Lambda, S3, RDS, DynamoDB, CloudWatch, IAM); Azure (Functions, Database for PostgreSQL, Key Vault, Entra ID)
Databases	PostgreSQL, MySQL, MongoDB, DynamoDB, Redis
DevOps & Testing	Docker, GitHub Actions, Jenkins, Git, Jira, JUnit, Mockito, Jest, Playwright, Cypress, Postman
Security	OAuth 2.0, JWT, RBAC, managed identity, HIPAA data handling

EXPERIENCE

Lead Salesforce Developer

Jan 2026 – Present

Peerstar LLC — *Pennsylvania*

- Lead developer on Peerstar's in-house EHR and integration platform on Salesforce, built to replace a failed third-party vendor. **Estimated $0.9M–$2.2M in build value**, and it removes an estimated **$280K–$750K a year** in licensing and managed-services costs.
- Shipped the referral and intake system that a prior vendor **billed $300K+ for and never delivered**. It tracks 69+ clinical and demographic data points through a multi-stage admission workflow, with NPI tracking and round-robin routing of website and partner leads to the admissions team.
- Built the two-way Apex sync between Salesforce and the Credible EHR that keeps **260,000+ visit records** current. It also covers the scheduling and document workflows that Credible's public web services don't support, with retries and a lookup table that maps picklist values to Credible IDs.
- Recovered **17,689 billable visits** lost to a silent integration failure, purged 762K corrupt records, and cut critical alerts from about 40,900 to 720 across 2,180+ active participant charts.
- Gave leadership its first view of **$1.19M/month in collections**, and surfaced **$11.5M in authorized service units** before they expired unused.
- Built React + TypeScript apps that run inside Salesforce on LWR Experience Cloud: 50+ components covering intake wizards, referral workspaces, admissions queues and leadership dashboards. Each one ships as a Vite bundle mounted by a thin LWC shell. That works within Lightning Web Security limits and avoids a separate web app with its own login and data sync.
- Built and published **PinPoint**, a Chrome extension for reporting bugs from any page. Users pin a note and screenshot to the exact spot, the report becomes a Salesforce ticket, and its status, assignee and comments stay in two-way sync with Monday.com. It is live on the Chrome Web Store.
- Built the participant self-service portal: React on Experience Cloud, backed by Azure Functions (Node 22) and Azure Database for PostgreSQL. The database is reached through Entra managed identity, so no database passwords are stored. Signing keys live in Key Vault and Salesforce access uses OAuth JWT bearer. Also built an Azure staff portal that turns hospital facesheets into referrals.

- Designed MCP tools and Agentforce agents that let staff look up schedules, visit details and referral status by asking in plain language, with role-based, HIPAA-controlled access to clinical and HR data. Currently building Alana, an assistant in the participant portal for scheduling and grievances.
- Connected Salesforce to Waystar (real-time insurance eligibility), Apploi (recruiting), Monday.com (projects and orders), Twilio (SMS, voice and secure links) and Microsoft Graph (calendars).

React Developer Intern — Jul 2025 – Dec 2025
Antra Inc — *Sterling, VA*

- Built full-stack apps with React and Spring Boot, including REST APIs and JWT authentication.
- Built internal workflow and survey tools with dynamic form rendering and validation.
- Made pages load faster with code splitting, lazy loading and fewer re-renders, and deployed container builds through CI pipelines.

Senior Software Engineer — Feb 2021 – Sept 2023
Accenture — *Bengaluru, IN*

- Built enterprise web apps on React and Spring Boot microservices, **cutting load times by 25%**. Split legacy monolith modules into services that were easier to maintain and scale.
- Designed REST APIs behind real-time dashboards and high-volume transaction systems. Used caching, query tuning and batch processing to handle 1M+ records.
- Wrote Apex triggers, Batch Apex and test classes with 90%+ coverage, and connected the CRM to custom React portals.
- Set up CI/CD with Jenkins, Bitbucket and Docker, **cutting deployment time by 30%**. Added JWT authentication, RBAC and API gateway security. Led code reviews and mentored developers.

Unilever: Veeva Vault QMS and SONAR

- Built backend workflows and campaign-management services rolled out to 12+ European markets. Customized pricing and compliance modules to meet regulatory rules, which **improved operational efficiency by 15%**.

Full Stack Software Developer — Jan 2020 – Jan 2021
Root Kings — *Pune, IN*

- Built React and Spring Boot apps with secure, API-driven dashboards, JWT authentication and role-based UI.
- Built Salesforce LWC components, Apex triggers and Batch Apex jobs for a growing CRM.
- Set up Shield encryption and field-level security for GDPR compliance, and managed 50K+ record translations across 6 markets.

PROJECTS

- **OrgForge**: a Salesforce org management platform covering test runs, governor limits, health scores, deployments, flows, permissions and bulk data. It also writes SOQL from plain-English questions. (LIVE)
- **ApexPulse**: an Apex test runner built on React and Spring Boot. It signs in with Salesforce OAuth 2.0, runs tests asynchronously through the Tooling API, streams live progress over WebSockets and keeps coverage history in PostgreSQL. Tokens are encrypted with AES-256-GCM, and the app is Dockerized on Render. (LIVE) (GitHub)
- **SkillBridge**: a job application portal built on React, Spring Boot and MongoDB. (LIVE)
- **YumRun**: a food delivery platform with smart ordering, built on Spring Boot with MySQL on Amazon RDS. (LIVE)
- **NewsZap**: a React news app with real-time headlines from NewsAPI. (LIVE)
- **DreamCRV**: a real-time car customizer built with Lightning Web Components OSS. (GitHub)
- **Gatherly**: a Salesforce app for creating events and tracking RSVPs. (GitHub)

CERTIFICATIONS

Salesforce Certified Administrator | Salesforce Advanced Administrator | Salesforce Platform Developer I | Salesforce Platform Developer II | Full Stack Automation Engineer | Core Java Internship

EDUCATION

MS in Computer Science, Pace University · GPA 3.8/4 — Sept 2023 – May 2025

Coursework: Distributed Systems, Cloud Computing, Data Structures & Algorithms, Design & Analysis of Algorithms, AI/ML, DBMS, Operating Systems, Web Technologies, Software Testing
